

RFID Advisory Services

RFID4U – Ensuring your success

RFID4U provides advisory services that will help you successfully deploy an RFID solution. Our team of supply chain experts and solution architects provides professional services such as consulting, strategic assessments, asset management experts and business case development to ensure that the right solution and training are developed for you.

RFID PROJECT MANAGEMENT

- RFID4U can manage your entire RFID project implementation.
- We will assist you with the development and implementation of an RFID strategy from process and deployment design to post-implementation support.
- Our RFID integration experience ensures your implementation will have minimal initial cost impact and integrate effectively into your existing operations.

SITE ASSESSMENT SERVICE

- RFID4U's site assessment service provides critical insight that can spell out the difference between a successful and unsuccessful RFID deployment.
- We characterize the electromagnetic environment in your facilities to identify any sources of interference.
- Our site assessment services will help define deployment variables such as antenna direction and location, power setting, and field strength.

RFID LAB SETUP SERVICE

- RFID4U's lab setup can simulate your RFID environment.
- The lab provides the equipment and infrastructure necessary to positively determine parameters critical to the success of your RFID implementation, such as tag selection, tag placement and tag orientation.
- This will determine the possibility of your project's success and help you take necessary steps for successful RFID deployment.

RFID VENDOR SELECTION SERVICE

- RFID4U understands the latest RFID technology. Our partnerships enable us to deliver solutions from leading vendors.
- Our partnerships and experience make us a true value-added partner capable of ensuring that your solutions will be both timely and effective.
- We assist you in engaging the right vendors appropriately to deliver the enterprise value you expected from your RFID implementation.

RFID TECHNOLOGY SELECTION SERVICE

- RFID4U guides you to the best combination of critical technology parameters that make all the difference between success and failure. These include active versus passive technology; air interface protocol selection; antenna and interrogator characteristics; middleware, enterprise transaction software and business analytics software selection.
- We will help you evaluate read distance, writer distance, tag response time, and storage capacity across different tag frequencies and types.
- We will help you evaluate RFID system components to design a solution that delivers the business benefits required.
