

Custom Course Development

Do you manufacture devices or sell products but your customers have difficulty to use them? Does it take too much time to train your own employees on new products and technologies deployed within your company? Do you feel that your current training efforts are ineffective?

If you answered yes to at least one of these questions, keep reading. You will find out how RFID4U can turn your training nightmares into a fast, effective and worry-free learning experience.

■ Content Development

Custom E-Learning Instructor Led Training

RFID4U provides RFID content development services at all levels, from providing subject matter experts (SME's), to designing courseware, writing storyboards, research, media development, programming, and implementation. Our proven content development process allows us to rapidly create content from existing, company-specific materials or develop entirely new materials in an efficient, accurate manner.

Our courseware offerings include various types of training such as instructor led training as well as synchronous and asynchronous SCORM compliant e-Learning including delivery or hosting.

■ Methodology

Our training development process is based on the ADDIE model with its five phases—Analysis, Design, Development, Implementation, and Evaluation, which represent a dynamic, flexible guideline for sculpting of effective training solutions. This model adds the advantage of rapid prototyping ensuring time and cost efficiency of the whole process.

For the design of the course we are using proven steps including:

- Documentation of the project's instructional, visual and technical design strategy
- Application of instructional strategies
- Storyboard creation
- User interface and user experience design
- Prototype creation
- Visual design (graphic design) including flash animations and video

■ Clients

From start to finish, RFID4U custom courseware design team can provide an unparalleled training solution for you. We are trusted by the largest corporations in the industry such as Symbol, Zebra, ThingMagic, Sun Microsystems, Logware and Omron (among others) to fulfill their training needs.
